It's good to know your business partners well!

Hanke + Seidel GmbH & Co. KG

The chemical substances and compounds that we deal with on a daily basis influence us as well as our environment. There is a multitude of different substances that are required for the most diverse products and procedures; and which are needed for your area of expertise rather than ours.

We make sure that you receive the chemical substances and basic products at the exact time and in the quantities you require. Naturally in safe, approved and practical packaging and as environmentally friendly as possible. We provide our services from Sauerland via East Westphalia as far as Münsterland. If required, we will provide our services to you wherever you are, with or without our partners.

The core of our business is the procurement and storekeeping of crude materials in our own formulation—just as it has been for over 50 years. We have also been an active player in many complementary areas for many years now.

Busch-Chemie Handels- u. Vertriebs GmbH & Co. KG
